

iMovie Export Options

To export a video in iMovie, edit your movie as usual, and then:

1. Go to the “Share” menu and select “Export Movie...”:

2. Select the size that is appropriate for your needs. You can click the small “i” to the right of each size to see the bit rate (Mbps) and the size in MB of the rendered file:

3. Export the video and then once it is finished rendering, view the file and see if the quality is acceptable. If the video is “fuzzy”, you may need to choose a larger size when exporting the video. TaskStream allows a file upload size of up to 500 MB.
